

KOLB CoatedProducts®

Coated corrugated board for undreamt-of advantages

Hightech corrugated board with tailored coatings for your products.

„Packaging that’s better“ –

it’s a claim more than lived up to by multifunctional and high-tech corrugated board from **KOLB CoatedProducts®**, not least because of the protective properties of the often unique coating technologies. Product protection for all kinds of applications and sectors provide new challenges on a daily basis. With our modular coating application we can develop a coating as the basis of packaging systems and tools tailored to your special requirements.

Processing

- all coated products are printable with up to four colours
- form and construction like regular corrugated board
- sealing types: taping, folding, stapling
- coated storage and stacking systems
- all products are made of materials with a natural basis
- combination of coatings possible

Standard coatings

- electrostatic defence
- protection against corrosion
- dust-free
- hygienical
- moisture resistant
- heat resistant
- wear resistant
- non-slip or sliding

Our coatings are special tailored for your needs!

"Our technological fastidiously packaging requirements are satisfied with KOLB CoatedProducts. With the guaranteed protection of our products we have a workflow and transport safety never known before."

***CORTRONIC®**
and **CORTRUST**
are printable
with up to four
colours*

Relax about static: packaging systems with electrostatic protection

CORSTAT™, **CORTRONIC®** and **CORTRUST** packaging systems give you perfect protection from uncontrolled electrostatic discharges, and always have perfect handling with regard to controlled dissipation of energy on the packaging surface. In accordance with the Faraday cage principle, your electronic product is always protected during storage, internal logistics and dispatch – both inside and outside EPA sectors. As well as coating technology, **CORTRUST** packaging systems also feature comprehensive corrosion protection as standard.

*Always protected:
VCI-coated
CORRUST
board protects
your products
against
corrosion.*

VCI systematic corrosion protection: **CORRUST**

Metallic ferrous and nonferrous-metal packaging items have to be specially protected against corrosion. VCI-coated **CORRUST** corrugated board provides effective protection for corrosion-sensitive packaged items. Storage and transport no longer require any preliminary and time-consuming packaging process: the conventional packing of these sensitive products often used to include greasing and later de-greasing of the surfaces. **CORRUST** does it cleverly. The elaborate working steps are quite simply dispensed with. A generously-dimensioned coating isolates VCI molecules inside the inner atmosphere of the packaging. As a result their polar character makes them settle on the surface of metallic packaged goods and prevents a reaction of oxygen with the metallic surface (passivation).

Presentation that's transparently good: SKINBOARD®

SKINBOARD® is the corrugated board with increased adhesion for skin foil. With additional VCI corrosion protection, the result is **CORRUST SKINBOARD®**. The skin materials used here are PE and Surlyn®.

CORRUST SKINBOARD® also gives you an up to four-colour printing option. That's why **SKINBOARD®** or **CORRUST SKINBOARD®** is the presentation packaging that places your product at centre stage. The transparent skin foil gives your product a skin-tight fit and always makes it look fantastic.

Choice of advantages:
Available in E, B, C, EB, BC and FE flute. All types guarantee high stability and no loosening of the corrugated board structure by foil springback.

Some like it hot ...?

FlameRetard is our name for the flame-retardant, coated corrugated board for display presentations and packaging, for packed items with special security requirements.

Depending on your requirements we will reach several building classes.

Grease, moisture and mould – we have something against them!

Grease-resistant coating

Oily and greasy products such as ball bearings should be safely and securely packed throughout dispatch and storage. Thanks to the grease-resistant coating system from **KOLB CoatedProducts®**, protection from grease is guaranteed throughout the entire duration of logistics and dispatch.

Moisture-resistant coating

Moisture is the natural enemy of corrugated board packaging. But not where the moisture-resistant special coating on **KOLB CoatedProducts®** is concerned. Special hardened varnish creates a highly efficient barrier against any kind of moisture.

Anti-mould coating

To prevent the formation of fungus or mould we have developed storage containers that provide the maximum possible product protection even in damp and badly ventilated storage atmospheres.

Wax coating

Whether as an insert or a complete export package, products can be sent on their way securely packed thanks to a special wax coating - even in hard climatic conditions.

No entry:
With special coatings against moisture not only your product will be protected - even the area around the Air-Pet-Box is secured of „animals moisture“ in nervous situations.

Variety for all needs:
Different parafinum coatings are the perfect protection as you like it.

Scented and hygienic coatings

Scented coatings

Special scented coatings turn standard packaging into a multi-sensual experience. Whether it's a faint scent of roses or of coconut, or of cinnamon and gingerbread flavour at Christmas time, you'll be certain to impress people with scented coatings from **KOLB Coated-Products®**.

CORCLEAN

Pleasantly scented, fungicidal and moisture-resistant – that's **CORCLEAN**. **CORCLEAN** was especially developed for disposable hygienic containers or sanitary packaging and utensils, e.g. disposable-towel dispensers. The optional printing makes these products into a real highlight where scent and hygiene are concerned.

Stop & Go: non-slip and sliding coatings

Packages or intermediate layers that have adhesive or gliding properties are used either to fix goods during transport or for the horizontal automatic loading of boxes and trays. Two different coatings provide different results, but they have one thing in common: process optimization and the simplification of your packaging process.

Rub-resistant coatings also help you to send even rough items safely.

Hard & Soft: surface protection and secure transport for your product

Soft coatings serve to protect surface-sensitive goods. The slip-resistant function also has a positive effect on transport safety. Varnished and sensitive parts will be securely packed in a perfect manner.

Power of packaging:
Your choice of over 350 coatings will give your product the storage and transport safety it needs. We are glad to assist you with our special tailored coatings due to your demand!
